Full Stack Developer with 4+ years of experience building and shipping web applications end to end — backend services in Node.js/NestJS and PHP/Laravel, frontends in React, Next.js and Vue.js, deployed on Amazon Web Services (AWS) and Google Cloud Platform (GCP). Experience spans high-traffic mobile game backends serving 100K+ concurrent users, serverless data and analytics pipelines, Direct-to-Consumer (D2C) payment integrations, and large e-commerce platforms. AWS Certified Developer – Associate and AWS Certified Solutions Architect – Associate. Currently completing an M.Sc. in Computer Engineering with published research on cloud resource allocation.

EXPERIENCES

Software Developer - Panteon Games

Dec 2024 – Present · Ankara, Turkey

- Designed and shipped a leaderboard service from scratch for mobile games with 100K+ concurrent players, handling high-volume score writes while keeping read latency low during peak traffic.
- Built a unified ad-network management panel, now used daily by a 5-person marketing team to run campaigns for 10+ mobile games across Mintegral, TikTok, Google Ads, Meta (Facebook), AppLovin and Unity Ads — integrating six third-party marketing APIs and normalising their differing data models behind one interface. Added a create-once, duplicate-across-networks flow that removed the manual rework of rebuilding each campaign per network, and consolidated ad spend, cost and performance KPIs into a single comparable view instead of six separate dashboards.
- Rebuilt legacy mobile game control panels on an AWS serverless stack (Lambda, API Gateway, Athena, DynamoDB) with a NestJS backend, reducing average API latency by ~30% and sustaining 99.9%+ uptime.
- Built a serverless event-tracking and analytics platform on Google Cloud, cutting monthly infrastructure cost by ~80% compared to the previous setup and giving product teams near real-time player behaviour data used to drive retention and monetisation experiments.
- Developed a Direct-to-Consumer (D2C) web store and payment integration outside app-store billing to improve net revenue per transaction, with idempotent order handling and reconciliation jobs to keep payment records consistent.
- Implemented an LLM-based image generation pipeline for dynamic in-game assets, adding a caching layer that eliminated redundant API calls and measurably reduced per-asset generation cost.
- Integrated a GPT-powered support chatbot into the customer support flow, resolving ~65% of ~5K daily queries automatically and reducing manual ticket load for the support team.

Software Developer - Moneo (Outsource Karaca)

Mar 2023 – Dec 2024 · Istanbul, Turkey

- Migrated Kommunity.com's legacy platform to a modular Node.js and React architecture, introducing clear service boundaries and automated test coverage that reduced regression bugs and made releases predictable.
- Refactored core backend services on NestJS and Laravel — query optimisation, caching, and payload reduction — lowering CPU utilisation by ~25% and improving average API response time by ~20% during high-traffic retail campaigns.
- Improved frontend performance and UX flows across large-scale e-commerce pages (render-blocking assets, image delivery, checkout funnel), contributing to a ~30% increase in average session duration.
- Built an internal admin platform for Karaca with Laravel and React, enabling the retail team to launch campaigns and manage product data without engineering involvement and shortening time-to-market for promotions.

Software Developer - Nette Interactive

Oct 2022 - Jan 2023 · Bursa, Turkey

- Set up automated CI/CD pipelines for Laravel-based corporate web applications, replacing manual deployments with zero-downtime releases and cutting deployment time by ~40%.
- Developed responsive, client-facing web interfaces with Vue.js and TailwindCSS for international brand portals, improving user engagement and reducing bounce rate.

Software Developer Scholarship - TUBITAK
Oct 2021 - Feb 2022 · Bursa, Turkey

- Developed backend modules and RESTful APIs in PHP for PyNar, an open-source project funded by TÜBİTAK (The Scientific and Technological Research Council of Turkey).
- Built the project's web interface with Vue.js and Bootstrap 5, ensuring consistent behaviour across screen sizes and devices.

EDUCATION

M.Sc., Computer Engineering
2025 – Present (in progress) · Gazi University · Ankara, Turkey

- Research focus: Multi-Agent Systems (MAS), Machine Learning, and cloud resource allocation.

B.Sc., Computer Engineering
2018 – 2023 · Graduated with Honors · Bursa Technical University · Bursa, Turkey

- Core Team Member of the **Google Developer Student Club**, leading collaborative projects and technical peer-learning sessions.
- **Huawei Campus Ambassador**; organized workshops and hands-on events to promote advanced developer tools and ecosystem growth.

SKILLS

Languages: TypeScript, JavaScript (ES6+), PHP, SQL, HTML5, CSS3
Backend: Node.js, NestJS, Express.js, Laravel, REST APIs, Microservices, Event-Driven Architecture
Frontend: React.js, Next.js, Vue.js, Nuxt.js, TailwindCSS, Responsive Design, Core Web Vitals
Databases: PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, Google BigQuery, Prisma ORM
Cloud & DevOps: AWS (Lambda, API Gateway, S3, DynamoDB, Athena, CloudWatch), Google Cloud Platform, Serverless Architecture, Docker, CI/CD Pipelines (GitHub Actions), Git, Linux
AI Integration: Large Language Model (LLM) APIs, OpenAI API, Prompt Engineering, Image Generation Pipelines
Practices: System Design, Domain-Driven Design (DDD), Code Review, Automated Testing, Agile/Scrum, Payment Gateway Integration

CERTIFICATIONS

• AWS Certified Developer – Associate — Amazon Web Services, Apr 2025
• AWS Certified Solutions Architect – Associate — Amazon Web Services, Jan 2023
